1152CS119	PYTHON PROGRAMMING	3	0	0	3

Course Category: Program Elective

A. Preamble:

This course focused on constructing reasonably self-contained programs, where the input and output either comes from a user or from files and any “external” functionality comes from imported Python modules.

B. Pre-requisites:

Sl. No	Course Code	Course Name
1	1150CS201	Problem Solving using C

C. Link to Other Courses:

Sl. No	Course Code	Course Name
1	1151CS115	Computer Graphics and Image Processing
2	1151CS111	Computer Networks
3	1152CS101	Cryptography and Network Security

D. Course Educational Objectives:

Students undergoing this course are exposed to

- Introduces core programming basics—including data types, control structures, algorithm development, and program design with functions
- Course discusses the fundamental principles of Object-Oriented Programming, as well as in-depth data and information processing techniques
- Students will solve problems, explore real-world software development challenges, and create practical and contemporary applications.

E. Course Outcomes:

Students undergoing this course are able to:
